SUMMARY

Full-stack and mobile developer focused on building reliable, user-facing software with React, Node.js, Express.js, FastAPI, Flutter, and MongoDB. Experienced in shipping role-based dashboards, REST APIs, real-time features, authentication flows, admin systems, and mobile-first workflows. Strong in API design, database integration, deployment, and building responsive interfaces for practical product use cases.

EDUCATION

Kakinada institute of engineering and technology , B.Tech 2023 – 2027

- Artificial Intelligence and Machine Learning, CGPA: 8.00

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, Java, C, HTML, CSS,

Frontend Development: React.js, Vite, Tailwind CSS, Responsive UI

Backend Development: Node.js, Express.js, FastAPI, REST APIs

Mobile Development: Flutter, Firebase Authentication,

Databases: MongoDB, SQL, Mongoose

Tools & Platforms: Git, GitHub, Android Studio, Vercel, Render, Firebase,

Core CS: Data Structures, OOP Concepts, API Design,

Certifications: EDUSKILLS artificial intelligence and machine learning , EDUSKILLS python developer ,Edunet techsaksham certificate

PROJECTS

AI Language tutor [GitHub](#) | Developed an AI-powered language learning application that helps users improve their communication skills through interactive conversations, grammar correction, vocabulary enhancement, and personalized learning support. Implemented AI-based natural language processing techniques to provide real-time feedback and an engaging learning experience.

Attendance-Management-System [GitHub](#) | Developed an automated attendance management system using Computer Vision and Machine Learning techniques to identify and record student attendance through facial recognition. The system captures images in real time, detects and recognizes faces, and stores attendance records accurately, reducing manual effort and improving efficiency.

Medical Disease Prediction System Developed a Machine Learning-based healthcare prediction system that analyzes patient symptoms and medical parameters to predict the likelihood of diseases and support early diagnosis. Implemented data preprocessing, feature engineering, and predictive modeling techniques to improve prediction accuracy and assist healthcare decision-making.

EXPERIENCE

KILL PROGRAM March 2025 – JULY 2025

- Build an computer vision based app for finding 400+ human activites
- Prepared datasets, handled preprocessing, and compared model performance using standard evaluation metrics.

ACHIEVEMENTS

- **Runner-up (Finalist), yearly Hackathon 2025**(Team lead – recognised by the mentors from iiit hyderabad for an project on house price analysis and team project
- **Tackathon (winner,2025** –An communicative program which is conducted with entire 2nd years students

EXTRA-CURRICULAR ACTIVITIES

Coordinator head , **GCC** – organized and coordinated technical and non-technical workshops and college-level events.and Conducted google cloud certifications Provided by college
